Figma File Instructions

We use Figma (a design tool) to create mock-ups for our reports in a more user friendly tool, before building the final version in Power BI. This can be a great way to iterate on design and gain user feedback, before investing time into building reports in Power BI.

Step 1: Downloading Figma

Figma can be used in your browser or by downloading it to your PC.

Step 2: Opening the Numerro Figma Kit File

Open Figma > File > Import > Select File *(Numerro Figma Design Kit.fig)*

Step 3: Using Canvas Grids & Components

You should now have access to the PNG versions of components, and be able to drag and drop them onto the canvas grids to get an idea for how your reports will look.
